

Advances in mycoses surveillance and management in Europe

F. Lanternier¹

¹Institut Pasteur, Université Paris Cité, Hopital Necker, APHP, Pasteur, France

This presentation will highlight recent advances in the surveillance and management of mycoses in Europe, with a focus on France. It will examine current epidemiological trends in fungal infections, including emerging pathogens and evolving resistance patterns. National surveillance systems and their role in improving early detection and guiding public health responses will be discussed. The talk will also address major therapeutic challenges, such as limited antifungal options, increasing resistance, and complexities in patient management.
